a) (1 punt) Calcula $\int_1^e \left(\frac{1}{x} - \frac{1}{x^2} \right) dx$ i $\int_{-1}^1 (x^3 - 2x + 5) dx$.

Solució. $\int_1^e \left(\frac{1}{x} - \frac{1}{x^2} \right) dx = \left[\ln x + \frac{1}{x} \right]_1^e = \left(1 + \frac{1}{e} \right) - (0 + 1) = \frac{1}{e}.$

$$\int_{-1}^1 (x^3 - 2x + 5) dx = \left[\frac{x^4}{4} - x^2 + 5x \right]_{-1}^1 = \left(\frac{1}{4} - 1 + 5 \right) - \left(\frac{1}{4} - 1 - 5 \right) = 10.$$
